

# AIX Cloud Service

Eliminate AIX cost and complexity by moving on-premise workloads and applications to our AIX Cloud Service.

**IBM's AIX and Power Technology** are an integral platform for mission-critical production applications, processing billions of customer transactions and payments every month. Supporting AIX in the traditional on-premise manner is costly, challenging to resource, slow to deploy, and hinders growth. Now you can eliminate AIX complexity by moving workloads and applications to the Data Integrity AIX Cloud.

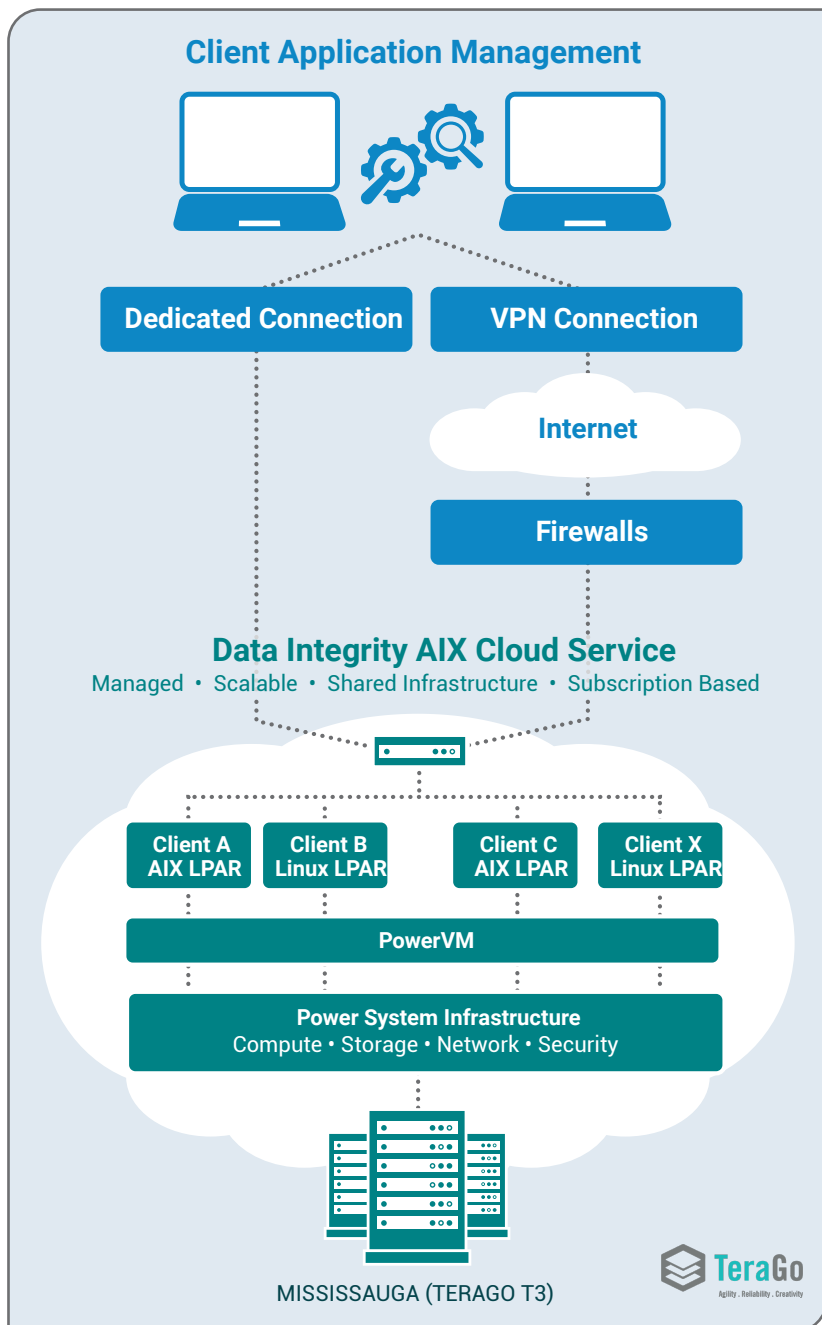

**Data Integrity**, in partnership with TeraGo Networks, provides Canada's first AIX Cloud Service that lets you rapidly access Power System and AIX resources as needed, at a fraction of the cost of on-premise solutions. Managed and Operated by Data Integrity, the AIX Cloud Service is deployed in TeraGo's Tier3 Data Center in Mississauga.

## Data Integrity's AIX Cloud Service at a Glance

- **Customized delivery.** Multi-tenant cloud or single-tenant cloud solutions.
- **Scalable platforms.** A scale-out platform based on IBM Power8 technology, ideally suited for test/development environments and managing core production applications.
- **Specialty skills.** Deep expertise in AIX and Power Systems infrastructure to maintain and manage your environment.
- **Robust network infrastructure.** TeraGo's datacenters provide resiliency, redundant network access, fault tolerance, backup and recovery, and high-availability services that protect customer data and applications.
- **SLAs.** Fully managed and available environment with 24x7x365 customer support
- **Data sovereignty control.** Run in a Canadian datacenter... Your data privacy, governance, and management will not be subject to the regulations of other countries.

## AIX Cloud Service Benefits

- **Consumption based model.** Pay for what you use.
- **Business Agility.** Deploy incremental resources quickly and efficiently.
- **Datacenter Costs.** Reduce floor space and environmental costs.
- **Redeploy Skills.** Free up scarce internal resources for other priorities.
- **OPEX vs Capital.** Optimize cash flow and free up Capital for other projects.
